Kazir Bazar, Sylhet, Bangladesh

PROGRAMMING LANGUAGES

Extensive programming experience in C++ and Python. Project experience with C, JavaScript, and SQL.

TOOLS/LIBRARIES

TensorFlow/Keras, scikit-learn, Jupyter Notebook, Google Colab, Git/GitHub, LaTeX, Flex, Bison

Web: Django REST Framework, React, Node.js, Flask, PostgreSQL, MySQL

LANGUAGES

Bangla (native)
English (fluent)

COMPETITIVE PROGRAMMING

Codeforces: veritaseum, rating 1256

LeetCode: veritaseum

450+ problems solved across both platforms.

EDUCATION

Metropolitan University, Sylhet, Bangladesh
B.Sc. in Computer Science and Engineering 2023 – PRESENT

Relevant coursework: Machine Learning, Artificial Intelligence, Data Structures and Algorithms, Compiler Construction, Bioinformatics, Digital Signal Processing, Computer Networks, Software Engineering and Design Patterns, Computer Graphics, Technical Writing.

RESEARCH

Socioeconomic and Temporal Drivers of Antibiotic Resistance: A Retrospective Analysis of the COVID-19 Impact

EFAST 2026, Oral presentation 2026

- Co-authored with Fariha Rahman (first author), Golam Mostofa Naeem, and Pushpo Gondha Paul.
- Built a stacking ensemble on ICU patient records to predict antibiotic resistance, and analyzed how socioeconomic factors and the COVID-19 period shifted resistance patterns.
- Studied concept drift between pre- and post-pandemic patients, and how it affects clinical models used over time.
- Presented the work orally at the EFAST 2026 conference with a recorded talk and live Q&A.

PROJECTS

Prezence: Attendance Management App 2026

Django REST Framework, React, PostgreSQL

- Built the backend for an app that lets university faculty take attendance from their phones and see which students fall below the exam-eligibility threshold.
- Implemented JWT authentication, Excel import of student lists, and Excel/PDF eligibility reports. Deployed on Render, Neon Postgres, and Vercel. Frontend by Fariha Rahman.

Mini-C Compiler 2026

C, Flex, Bison, Python/Flask

- Led a three-person team building a six-phase compiler front-end for a small C-like language: lexical, syntax, and semantic analysis, AST and symbol table, and three-address code generation.
- Wrote the lexer, build system, and code generator, plus a Flask web interface that shows the output of each compiler phase.

Baymax: Multi-Modal Pneumonia Detection AI COURSE PROJECT

TensorFlow/Keras, scikit-learn

- Combined chest X-ray features from a ResNet50V2 network with clinical blood data in a Random Forest classifier, reaching 83% test accuracy. Led the technical implementation.

MU Connect: University Web Portal PROJECT 300

Django, React, MySQL

- Built the backend for the CSE department portal: JWT login, role-based access for students and faculty, and REST APIs for student records, course data, and announcements.

Online Shopping and E-Commerce System COURSE PROJECT

Relational database, backend

- Designed the relational database and backend for an e-commerce platform that manages inventory, user carts, and transactions.
